

Wipe-clean keypad

Electrone Europe has launched the **720 series** of keypad terminals. The 720 IP, PoE, Serial and USB keypads are now available with a wipe-clean or wall-mounted housing and soon to be available metal outdoor weather-proof housing.

The Electrone 720 Series of terminals offers a wide range of options including graphic and

numeric 2-line displays, USB, PS2 and serial connectivity, as well as greater flexibility to connect directly onto an intranet or the internet, via a configurable RJ45 connection – with or without PoE capabilities. Certain models of the keypads can also include a magnetic stripe reader, biometrics reader or chip card reader, if required. The 720 IP keypads are now available as a multi-voltage unit, which allows them to connect to any power source within range.

Stuart Thorn, the company's CEO, said: "From experience in the market we know there are varying environments in which the Electrone 720 keypad series need to be used. We can now deliver these keypads as a desk-

top model with either a standard keypad, or including a wipe-clean membrane for sectors such as retail, healthcare, hospitality or catering environments, and, if needed, the keypad can also be ordered with a wall-mount housing perhaps for use in conjunction with a remote monitoring or access control solution. Similarly we are developing a weather-proof

housing for the unit, which makes the keypad suitable for use in outdoor locations."

Electrone has also increased the flexibility of the range with the introduction of an LCD display which is capable of handling a wider range of character sets.
