

WAVE AND PRINT

A TOUCH FREE PRINTER FOR HYGIENIC LABELLING

YOU WAVE – IT PRINTS – A PERFECT TIME AND DATE STAMPED LABEL IN 1 SECOND

No more fumbling with labels, paper tape, pens and caps...
now a quick and hygienic way to print those essential date and time labels!

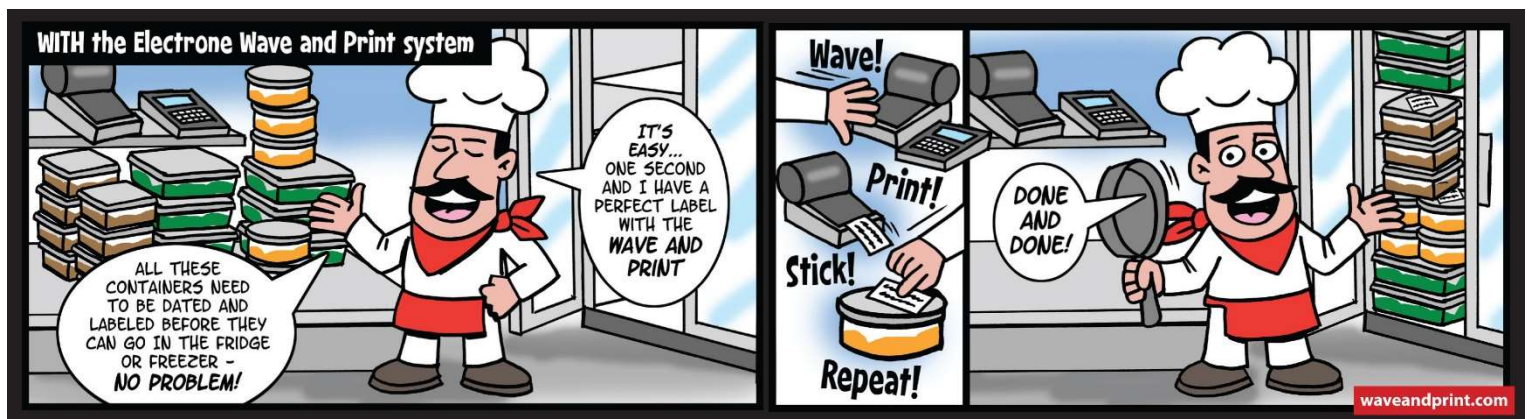

- Print labels without touch
- No computer required
- Just place the system in position and wave for a label
- Customizable labels

Practical labelling in commercial kitchens and laboratories requires clear and specific recording of date information. Handwriting can be illegible, writing implements can become vectors of contamination, and labels can be overlooked by busy staff managing time constraints. The new Wave and Print label printing system is designed to address these barriers to hygienic storage.

A simple wave prints a to-the-minute adhesive label for use in commercial kitchens, laboratories, or wherever else time and date need to be captured. Labels can be customized according to customer need, including size and content. The printer is entirely self-contained and does not require a computer or internet connection. The printer and keypad are powered by a single plug-in power supply.

The label can be configured to have a line of static text at the top, which could be the business name or an instruction, up to 16 characters. No configuration is required for the system, just plug in the power supply to a wall socket and start printing beautiful labels!
